Ball Valve Alternative

Thinking about a cost-effective alternative for automated ball valve replacements in your water, air, steam or chemical service?

Angle Body Disc Valves are a compact and lighter-weight with a longer service life, warranted for a two million cycle life! Angle valves are typically 20-30% less the cost of ball valves. They feature hefty seat seals for bubble tight shutoff. The hardened, polished stems and spring loaded PTFE chevrons ensure a long packing life. They are available in brass, bronze and stainless steel constructions, and are great for caustic washdown.
