mag-drive centrifugals

Want A Process Pump Alternative?

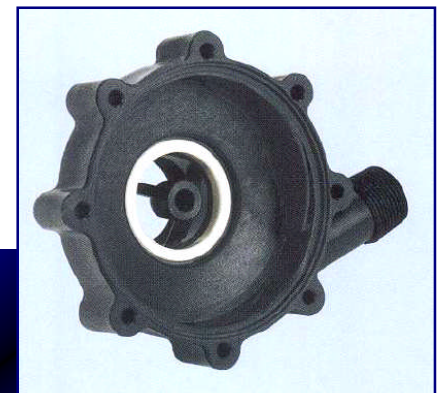

The heart of the process feed system is often the pump. It must be reliable and maintenance-free. Many pumps are not. Some do not even warranty non-water applications.

In our continuing effort to offer products that our clients need, we now offer Tech-Mag Pumps. These magnetic drive centrifugal pumps have a design and construction that is superior to similar pumps currently available.

Great care has been taken to examine and reengineer each component. The result is a pump that can be easily retrofitted into existing installations where centrifugal pumps are failing.

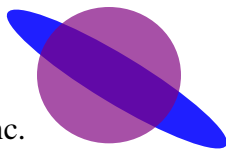

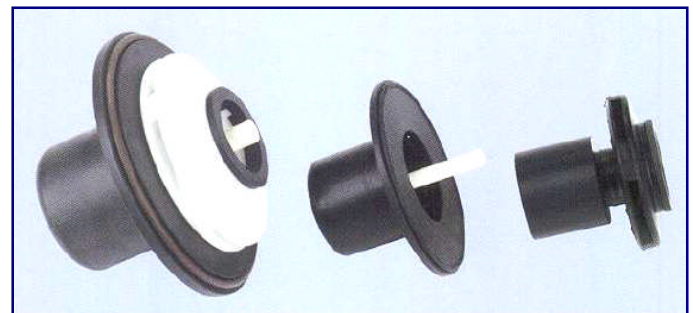

They are specifically designed and warranted to work with acids, alkaline solutions, bases, hydrocarbons, solvents. Some of the features are outlined here.

TECH-MAG CENTRIFUGAL PUMP

- o Zero Leakage
- o Improved Magnet Design
- o Massive Thrust Bearing
- o Service Flexibility
- o Polypropylene, PVDF, 316SS
- o Dimensionally Interchangeable
- o Flows to 165 gpm
- o Heads to 120 feet

PUMPS & EXPERIENCE

*Why do companies call Murphy & Dickey for chemical feed solutions?
Thousands of successful applications in chemical feed for biocides,
acid & caustic feed, pH neutralization, plating, gas scrubbers, ethanol
facilities, lubricants and process addition in dozens of industries.
